

## **Format-1. Agribusiness work Plan**

## **A) Introduction & Background-**

### **1. About the District & Project area describing the geographic location**

The District Situated in the Central Himalayas, the district is named after the town Almora. According to local tradition, the earliest inhabitants in Almora were Tewaris who were required to supply sorrels daily for cleansing the vessels of sun temple at Katarmal. Sorrel is locally called lamora which in course of time, got corrupted into Almora and gave its name to the Khagmara hill on which it is grown. Chand Rajas made the place their capital. Ancient lore mentioned in Vishnu Purana and Mahabharata present primordial accounts of human settlements in the district. The Sakas, the Nagas, the Kiratas, the Khasas and the Hunas are credited to be the most ancient tribes. The Kauravas and Pandavas of the Hastinapur royal family were the next important princes from the plains who are said to have affected the conquest of these parts. After the Mahabharata war the district seems to have remained for some time under the sway of the kings of Hastinapur whose authority was never more than nominal. The actual rulers were the local chiefs of whom the Kulindas (or Kunindas) were probably strong in the southern and western part of the district. The Nagas held domination over Patti Danpur, Salam and Nakuri of tahsil Almora. The Khasas were another ancient people who belonged to an early Aryan stock and were widely scattered in those times. They gave this region the name Khasadesha or Khasamandala. The next age's silent of them may probably be the ones signaling many petty states, rivaling each-other for supremacy and ultimately chartering the inauguration of the noted and enduring dynasty of Chands. Earlier to this, the Katyuris are recorded as the dominant clans in copper and stone engravings. Very little is known of this dynasty, particularly relating to this district. The Chand dynasty from their inception in 953 A.D. to their ouster in the late 18th century present a saga of strife, with horrifying series of wars with rulers of Garhwal culminating in the destruction of this prosperous land and establishment of inglorious Gurkha rule. This dynasty was peculiar in that it made Almora the seat of strongest hill power in 1563 A.D. From that time onwards, the limits of kingdom of Kumaon extended over the entire tracts of districts of Almora and Nainital. A notable contribution of these rulers was unification of entire Kumaoni land, though, the process was belated by centuries for hostility of the rulers of Garhwal. Some of the kings of this line were of supremely religious temperament and their inclination fruited in maintenance and erection of many temples in the district. These peace time pursuits were possible because of diplomatic patronages procured by Chand rulers from Emperors at Delhi by tact and shrewdness with a view to foiling the horrendous attacks of hostile governors of Delhi bordering southern frontiers of Kumaon.

**Location and Size :** The district lies in the Himalayas and consists of a series of ridges and valleys. The snow-clad peaks and glaciers lie in the extreme north of tahsil Almora and the ranges diverting from Nanda Devi group of mountains extends to the southern and eastern parts of the district. The district is bounded in the north east and north lie districts of Pithoragarh and Bageshwar, on west lies district Garhwal on north and north-west lies district Chamoli and on the south is district Nainital and newly created district Champawat is on the

east. State headquarters Dehradun is 412 km. from here. The district is situated between latitudes 20°8' and 29°8' on the north and longitude 71°1' and 81°5' on the east. Total area after carving of Bageshwar district is 3139 sq km as intimated by the office of the Surveyor General, India. The height of the district headquarters is 1646 m from sea level.

#### About Daula Devi Block( total RV 232)

Daula Devi is a Block located in Almora district in Uttarakhand. Positioned in rural region of Uttarakhand, it is one among the 12 blocks of Almora district. As per the government records, the block code of Daula Devi is 70. The block has 232 villages and there are total 12732 families in this Block.

#### Population of Daula Devi Block

As per Census 2011, Daula Devi's population is 60620. Out of this, 28291 are males whereas the females count 32329 here. This block has 9196 kids in the age bracket of 0-6 years. Out of this 4775 are boys and 4421 are girls.

#### Literacy rate of Daula Devi Block

Literacy rate in Daula Devi block is 61%. 37545 out of total 60620 population is educated here. Among males the literacy rate is 72% as 20613 males out of total 28291 are educated whereas female literacy rate is 52% as 16932 out of total 32329 females are literate in this Block. The dark portion is that illiteracy ratio of Daula Devi block is 38%. Here 23075 out of total 60620 people are illiterate. Male illiteracy ratio here is 27% as 7678 males out of total 28291 are illiterate. In females the illiteracy rate is 47% and 15397 out of total 32329 females are illiterate in this block.

**Climate :** The altitude greatly affects local climatic condition in the district. Generally summers are warmer in low-lying valleys and cool at high altitudes. The temperature at high altitudes goes below zero mark during winter with occurrence of snowfall. The maximum temperature recorded at district headquarters was 29.4 to 0° C and lowest of 4.4 to 8.5 during 2000. The district has a highly rugged terrain, marked with steep and high ridges and deep and narrow valleys through which flow the Ramganga, the Kosi, the Sarju and their tributaries. The general slope is towards the south or south-east in the eastern half and towards the west or south-west in the western half. The elevation is high ranging from about 1500 m to 3000 m. above sea-level towards the north, while in the valleys in the south, elevations as low as 300 m may be reached. The climate, therefore, depends largely on elevation and exposure to the sun and winds. The chief climatic feature of the district is its severe winter which lasts from December to March and during which considerable precipitation occurs often as

snow fall, in association with western disturbances passing eastward across north India. The district gets most of its rainfall from the monsoon current, which penetrate, through the valleys from June to September. The district receives an average annual rainfall of about 1000 millimeter mainly confining to rainy season. The actual rainfall during calendar year 2000 was 818 centimeter. About 75 per cent of the annual rainfall occurs during the monsoon months, June to September. With the onset of the summer, monsoon rainfall increases sharply in June. July is the雨iest month, which accounts for about 50 per cent of annual rainfall. In September depressions from the Bay of Bengal occasionally reach Uttaranchal and affect the weather in the district, when heavy rain may occur. With the withdrawal of monsoon in September, rainfall rapidly decreases and November is practically rainless. The rainfall is fairly variable. The amount of rainfall in the district varies from 113 cm to 250 cm depending upon the altitude of the place. Temperature varies from place to place depending upon factors like elevation, location and exposure to the sun. January is the coldest month with the mean temperature at 10°C. Cold waves, in the wake of the western disturbances often make the conditions when temperature goes down below freezing points. The relative humidity increases rapidly with the onset of the monsoon and is generally above 80 per cent during July to September. The actual rainfall during calendar year 1998 was 961 mm.

**Soil :** The types of soil which are met with in the district are the same as usually found in the hilly areas viz. the gravel sand, sandy loam, clayey loam, heavy clay and calcareous soils. They differ in colour and texture according to the locality, altitude and the composition of the subsoil rocks. The red soil found on slopes and ridges of hills is sandy and when dry, grayish, becoming reddish when moist. The brown forest soil is most extensively found in the hills. It is sandy along sharp gradients and loamy or clayey on milder slopes. The colour of the soil is brown or dark brown depending upon the quantity of organic matter in it. The pod sol soil is mostly clayey and dark gray, turning into brown forest soil as a result of cultivation and terracing. The sub soils are often light and unconsolidated even under terraced cultivation. These are incapable of retaining much of moisture.

**Land and Land use pattern:** Land in the district is classified as talaon (irrigated), first class upraon (dry), second class upraon and ijran (inferior land, cultivated intermittently) also known as katil, khil or kala banjar. Level and spacious plains are formed by swift flowing rivers while they slow down in due course and widen out at the foot of the hills. The valleys of various rivers contain the best type of talaon lands. These are of two classes, sera and panchar. Sera lands have a perennial supply of water and a gentle slope. The fields are generally lowlying and level and enjoy a comparatively warm climate. The soil consists of the finest clay and is very fertile and the finest varieties of rice are grown in them. Panchar land lie at the levels higher than those of sera and are generally inadequately irrigated except during rains and they are less fertile. The upraon land are situated usually at higher elevations. They possess no means of irrigation except rainfall. Their quality varies according to the fertility of the soil, evenness of the fields and sunny or shady locations etc. The upraon lands produce all

kinds of crops including paddy, wheat and barley, otherwise mandua, jhangora, bhat, chuwa and maize are the usual crops. Ijran lands are found on the slopes of the high hills, soil being very poor and is full of stones and pebbles. The crops raised in these lands are gahat and chuwa. The main feature of cultivation here is the longer period of fallow, ranging from two to four years allowed between two crops. The land use details of the district as per information available in the statistical bulletin 1997 comprise 49% of total under forest, 8 per cent cultivatable waste, fallow land 1 per cent, usar and not fit for agriculture 3.7 per cent, other agricultural land 3 per cent, orchards 7 per cent, horticulture 8 per cent and net area sown 19 per cent.

**Agriculture and Crop Pattern :** Agriculture is the mainstay of population in the district. The agriculture year begins in March and April when rabi crop is reaped and fields are ploughed for kharif crops. Usually there are two harvests namely rabi and kharif but zaid crops are also practiced in the district. The rabi crops consists of wheat, barley, gram, peas, masoor, arhar, oilseeds and soybean. The kharif crops are paddy, sugarcane, maize, urd, moong, potato, mandua and tobacco. Turmeric and ginger are also sown in the district. The climate and soil of the district are suitable for cultivation of fruits and vegetables. The produce includes apples, peaches, pears, apricot, cherries and plums. The area under main crops during the year 1995-96 as reported in statistical bulletin comprised wheat 57654 hectares, paddy 37300 hectares, barley 5744 hectares, maize 2357 hectares, mandua 42813 hectares, sawa 16571 hectares, pulses 3582 hectares, oilseeds 1295 hectares and potato 2604 hectares. The role of the rotation of crops in checking the exhaustion of the soil is well known to farmers in the district.

**Irrigation :** Nature has dealt kindly with district as regards to means of irrigation. Rainfall is one of the most important source of water supply for the agriculturists. The area being hilly, rain water flows away very quickly. The water of bigger rivers flowing in deep valleys can be utilized for irrigation only after lifting it with power driven pumps. The other sources of irrigation are through tanks, high dams, canals and guls. The gross irrigated area during 1996-97 was 16408 hectares and the net area irrigated was 8749 hectares. Among the means of irrigation by source, canals comprise 41 per cent of the irrigated area and other sources accounted 59 per cent of the area.

**Gram Panchayat & Village Development :** In the strengthened Panchayat Raj System, Gram Panchayat plays important role in the development of village economy. It acts as executive of the Gram Sabha. A total of 1052 Gram Sabhas exist in the district. Gram Sabha prepares master plan and development activities are carried out. The jurisdiction of Gram Sabha is mainly concentrated within the village whereas Naya Panchayats cover more than one Gram Sabha. Elections are periodically held to elect members and Pradhan of Gram Sabha and Nyay Panchayats. Government has attached many department to Gram Sabhas in order to ensure that the benefits of government programmes may reach to the common people. Gram Sabha controls and manages all the activities concerned with the welfare of village community. They also prepare priority development plans for the over all growth of the village dwellers. Members of the Gram Sabha are

responsible for day-to-day administration. The main duties relate to construction, repair, cleaning and lighting of fairs, establishment and management of common land and grazing grounds, maintenance of schools etc. and promotion of social and communal harmony and goodwill amongst the villagers.

**(iv) 2001 Census findings (a) Population Distribution :** The total population of the district is 630,567 in which 576,062 live in rural and rest 54,505 in urban parts. There are three tahsils in district namely Bhikiya Sain, Ranikhet and Almora. The most populous tahsil is Almora followed by Ranikhet. Bhikiya Sain is least populated tahsil. The urban population in the district is about 8.6 per cent. The urban population is maximum at about 11.6 per cent in Almora tahsil. There are 2,274 revenue villages in the district out of which 2,172 are inhabited at the 2001 Census and remaining 102 are un-inhabited. The total rural population of 576,062 is spread over 11 CD Blocks and 24 inhabited forest villages. The most populous CD Block is Tarikhet with a population of 69,092 with the maximum number of inhabited villages (261). About half of populated villages have a population less than 200 and such villages form as high as about 58.8 per cent of total populated villages in Bhikiyasain CD Block. Although the population density in the rural district is about 213.4 highest proportion (29.8%) of villages are with a population density range of 101-200 per square kilometer. Such villages contain as much as about 25 per cent of total rural population.

**2. About the District & Project area in context of Agriculture and Agribusiness :** The area is rain-fed (92%) with scattered land holdings and poor level of technical knowhow among farmers. The subsistence agriculture is making the people to continue the farming at mass scale. However, key progressive farmers are willing to adopt the new technologies and can play key role in enhancing the production for marketing. The scope is immense for spices, millets/pulses and vegetables with value addition and exploring the markets in coming years.

As per ToR the main objective of ABSO for Enhancing Livelihood Opportunities through Agribusiness Support, Income Generating Activities and consolidation of GRAMYA-I activities. The role of ABSO is crucial in watershed approach as livelihood means a lot for residents and farmers in project activities those are directly linked with their income and availability of local resources. The Agribusiness Support Organization (ABSO) has conducted detailed survey, consultations, RRA and meetings with different stakeholders of the area on socio-economic status, crop cultivation, existing PoPs and marketing system along with their views and willingness towards sustainable livelihoods and to cope with various challenges by ensuring profit from their agriculture land. Initiating the process for effective supply chain by identifying entrepreneurs in rural hill areas is also the key for achieving the goal of enhancing income and sustaining the livelihoods.

## **B) Project Objective- Objectives**

- To enhance the livelihood opportunities of marginal farmers.
- To develop an action plan for establishing sustainable forward and backward linkages.
- To strengthen the institutions for sustainability of project interventions.

## **C) Expected Outcome of the Agribusiness -**

- To identify the various challenges and constraints of agribusiness and accordingly a sustainable plan developed.
- To provide PoPs and technologies for enhancing the productivity.
- To have selective 4-5 commodities for detailed VC and Supply Chain promotion.
- To promote the local niche products market following organic concept.
- Establishing marketing channels through cooperative and FICGs in consultation with private players.

## **D) Approach & Methodology adopted-(Describe it under following heads)**

Based on earlier experiences about agribusiness from GRAMYA-I and KSLCDI project being implemented by CHEA the strategy for developing business plan was applied following two way approach. The suggestion made by World Bank team during meeting at Dehradun, agribusiness consultant of GRAMYA II as well as suggestion given by PD, Kumaon and DPD, Almora was also taken into account for developing the plan. The point mentioned about doubling the income by 2022 is also being the part of this plan.

<b>Step 1:</b>	The status of existing crop area and production along with season and duration of production was worked out in depth with FICGs
<b>Step 2:</b>	Identification of clusters for various crops to have surplus produce at one place that result in easier logistics arrangements and also for demonstration purpose.
<b>Step 3:</b>	The information on seed/input used and PoPs were generated with set of

	examples and participatory manner to have bird's eye view on gaps and potential for promoting different crops and technologies in the area.
<b>Step 4:</b>	The discussion has been made on the methods applied during post harvest, method of collection, storage if required and local transportation until road head.
<b>Step 5:</b>	The exercise was made with FIG members to explore the existing marketing system for their produce with focus on 3 different markets (primary, secondary and tertiary). It was also discussed about transport system and cost involved in whole supply chain.

Simultaneously, the survey and meeting with retailers and traders was also made based on information generated from producers about their markets. Here we applied top-bottom approach to have common consensus for plan at the end to capture and fulfil the requirement of the buyers, season and mechanism of supply, transport and the produce.

- ABSO Team mobilization for task : The team of ABSO had been mobilized and accordingly the whole concept was shared to create an environment of agribusiness promotion with community involvement.
- Data collection under Base line survey: The indepth survey and FGDs were conducted RV wise to have best of information from the ground. The data was generated using different techniques and accordingly reworked to avoid any discrepancy for further planning.
- Selection of Villages (as per ToR): As per baseline survey and the certain criteria required to promote agribusiness, the concept was initially to cover 50% of RVs to have demonstrative impact which would lead to further expand the concept in whole division. Although the support for surplus produce is proposed to be given to all RVs.

E) Selected villages -List of selected villages (*along with road Map\* of selected Revenue village*) \*need not to scale

#### List of Selected Villages under Agribusiness Programme

**UTTARAKHAND DECENTRALIZED WATERSHED DEVELOPMENT PROJECT (GRAMYA PHASE II) ALMORA DIVISION**  
**LOCATION OF SELECTED VILLAGES UNDER AGRI BUSINESS PROGRAMME**

## F) SWOT Analysis – (Based on Baseline survey)

### 8. SWOT analysis

#### Rapid SWOT of Area

##### STRENGTH:

- Experience and learning of Gramya I
- Favorable climate of traditional millets, pulses and spices
- Existing FIG's and Federation
- Availability of diverse flora and forest area
- By default organic practices are in field

##### WEAKNESS:

- Major area rainfed (is also an opportunity)
- Lack of awareness among farmers towards advance appropriate technologies
- Lack of appropriate irrigation and drinking water facilities
- Damage to crops by wild animals
- Scattered, inaccessible land holdings, absentee households
- Lack of facilities for technical and input supply
- Lack of surplus produce for marketing

##### OPPORTUNITY:

- Local entrepreneurs can be developed (copper and bamboo artisans)
- Increase in per unit area production through technology intervention
- Value addition of agro products and seed production
- Organic certification specially of millets and grains

- Promotion of bee keeping
- Promotion of bamboo based articles and pilgrimage tourism
- Promotion of local entrepreneurs (service based enterprises)
- USP potential of commodities further explored

#### **THREATS:**

- Migration of youths and couples
- Increased human-wild life conflict
- Climatic variations
- Appropriate market development and poor management of money/funds causing misuse of earnings

## **Baseline information of Agribusiness**

**Agribusiness Detail of Selected Village**

C.Base line data of crops – RV Wise (Explain the tabular information in the form of text)

After having detailed survey of the selected villages followed by meetings with villagers it was revealed that the production is confined for self consumption of most of the agro products and if marketed it restrict to local markets only. In terms of villagers those are selling the produce in local market is confined to 15-20%. At present the produce sold in the market share 20% during season when produce is available (around 90-100 days) in the area while during other season the share is nil. **The RV wise details of area, productivity, production are given here under:**

Thus, ample scope and potential exist in the area for enhancing the productivity through project intervention to have opportunities for majority of households to gain commercially.

#### D. Base line data of crops with Marketable Surplus (*Explain the tabular information in the form of text*)

It is vital to work on demand exits in the markets because only enhancing the production is not the solution for sustainable livelihoods. Based on information generated from villages about the markets it was attempted to generate the details information about produce required and supply pattern from the markets. The details on supply and demand are given here under:

Slno	GP	RV	Name of Crops	Surplus quantity (crop wise) qt	Marketable surplus qt

**Base line Information of Gramya-I Farmer's Federation**

Name of Gramya-I Federation -Paharpani Utpadak Evam Vipran Self Reliant Cooperative

Status - Operational /Non- operational- Operational

Unit:- 01

GP:- 06

RV:- 08

No. of FIG's linked:- No FIG linked with federation. Now federation works with only the members those individually linked with federation after getting membership and pay for the membership fee.

No. of farmers linked to the Federation:- 165

Activities of Farmers Federation -Support to cooperative members as input support, technical assistance

Annual turnover-(lakhs)- 27

Savings: - (lakhs)- 2.35

Any other base line information related to Farmers Federation:- Cooperative members are rich in vegetable cultivation and sound knowledge about HYV, uses and marketing of produce to different markets.

## **Agribusiness Plan**

### **A) Production Plan**

It is planned to increase the production period from present 100 days to at least 120-140 days thus to ensure quality and quantitative supply for around 4-5 months. This is planned specifically for vegetables and high value crops. For niche products (millets, pulses, etc.) the high end market is to be approached by ensuring certification and liaising with external buyers. The major tools and activities are proposed are here under:

- Expansion of OSV and high value crops area partially (10%) by replacing the area under subsistence agriculture.
- Depending on availability of irrigation facilities around 20% area will be brought under irrigation.
- The number of farmers involved in commercial activities will be increased from 550 to 700. It will ensure the surplus production and also motivate others for adaptation of income generation interventions.
- Ultimately per unit area production will be increased from 30 to 45% resulting in better returns from same land by applying and adopting appropriate technologies.
- Collective marketing at cluster level to reduce logistic cost will be ensured for capturing local markets.
- Promoting local produce and items as "Prasaad" in Jageshwar Dham which is in the circuit of tourism department. At present around 90000 to 100000 pilgrims/tourist visit the area during the year with peak season from April to September. The focus will be on "Ramdana laddu" and ringal/bamboo basket as local product.
- Promoting floriculture in surrounding 3-4 villages of Jageshwar for ensuring uninterrupted supply of marigold flowers.
- In addition innovation on soap making, promotion of poultry, mushroom, climate adaptive energy options (biogas) will be demonstrated.

During first year focus will be to catch local markets as there is immense demand of vegetable and high value crops in which at present area share for 20 % supply. However, pulses, millets and allied niche products will be supplied to different markets and support from private buyers, agencies working on business development and at various promotional events.

Although from second year onwards, based on results and participation by FIGs/cooperative the plan to develop relation in different markets will be attempted for surplus produce. It will also be worked out on cost benefit analysis as sometime even in big markets due to competition and various costs net benefit remains low than from local and adjoin district markets.

**1. Crop planning & Input Support - (Explain the tabular information in the form of text)**

		Crop planning & Input Support plan -for Project period					
Slno	Crop	Area (ha)	Input requirement analysis		Estimated Production(qt)	Estimated Sale Value (Lakhs)	Specify Kharif /Rabi /Zaid

**b) Processing center plan-(Explain the tabular information in the form of text)-**

Division	Unit	Processing centre (Location )	Name of RV linked
Almora	Kafli	Kaflikhan	22
	Garudabanj	Nayal Band	14
	Bhanoli	Dungra	17

c) Processed products plan (*Explain the tabular information in the form of text*)-

Name of Raw Produce	Final Product	Targeted Production during project period (qt)	Sale value (lakhs)	Market targeted
Ginger	Ginger Garlic Paste	200	40	Uttarakhand and Delhi
Garlic	Ginger Garlic Paste	200	40	Uttarakhand and Delhi
Coriander	Powder	15	4.5	Uttarakhand and Delhi
Turmeric	Powder	125	50	Uttarakhand and Delhi

d) Requirements for processing unit (Tools/equipments & infrastructure etc.) (*Explain the tabular information in the form of text*)

Particulars/items	Quantity	Unit cost(Lakhs)	Total cost (Lakhs)
Spices Grinder	04	60000	240000
Paste Maker	04	25000	100000
Pakaging Machine	04	20000	80000

e) Works under the -Post harvest-civil works & Goods:-(*Explain the tabular information in form of text*)

Item	Physical works targeted	Financial (Lakhs)
a)Post harvest -Small civil works	04	10000000
b)Post harvest -Goods	LS	2500000

f) Works under Pilot fund Project (*Explain the tabular information in form of text*)

Item	Physical works targeted	Financial(Lakhs)
Pilot Fund Support		

--	--	--

*\*Any other innovative intervention proposed regarding logistics arrangements /supply chain management, Value addition and marketing can be planned under pilot fund. (Give detail planning, if any)*

### **C. Institutional Strengthening**

### C) Capacity building plan

#### A. Trainings- (Explain the tabular information in the form of text)

Unit Level Trainings			
Division	unit	Trainings proposed	No. of members
Almora	Bhanoli, Garudabanj, Danya and kaflி	32	1500

Division Level Trainings			
Division	unit	Trainings proposed	No. of members
Almora	Bhanoli, Garudabanj, Danya and kaflி	8	250

#### B.Exposure (Explain the tabular information in the form of text)

1)Exposure tour with in state				
Division	No. of exposure	Venue	No. of days	No. of beneficiaries
Almora	08	Uttarakshi,Almora, Pithoragarh, Nainital	2	120

2.Exposure tour Outside state				
Division	No. of exposure	Venue	No. of days	No. of beneficiaries
Almora	04	Delhi and Mumbai	07	60

## **Consolidation of Gramya-I activities**

**Name of Gramya -I farmer's federation: 1. Paharpani Utpadak Evam Vipran Self Reliant Cooperative**

*(Give planning for each farmer's federation separately)*

### **A) Institutional strengthening**

## Capacity building plan (for strengthening of Gramya-I Federation)

### A. Trainings- (Explain the tabular information in the form of text)

Unit Level Trainings			
Division	Level of training(Village level/unit level/Division level	Trainings proposed	No. of members
Nainital	Village Level	32	950

### B.Exposure (Explain the tabular information in the form of text)

Exposure tour with in state				
Division	No. of exposure	Venue	No. of days	No. of beneficiaries
Nainital	04	Haldwani, Gairsain	02	60

Exposure tour Outside state				
Division	No. of exposure	Venue	No. of days	No. of beneficiaries
Nainital	04	Delhi,Himanchal	07	40

## **B) Production Plan**

1. Agribusiness Support (*Explain the tabular information in the form of text*)

		Crop planning & Input Support plan -During project period for Federation ( <i>Select the crops as per requirements of Farmers Federation</i> )					
Slno	Crop	Area (ha)	Input requirement analysis		Estimated Production(qt)	Estimated Sale Value (Lakhs)	Specify Kharif / Rabi / Zaid
			seed(kg)	(Others inputs like Fertilizer, pesticide etc in lts/kg)			
1	Agriculture crops						
a)	Cereal crops / millets						
b)	Pulse crops						
c)	Oilseed crops						
2	Horticulture crop						
	Vegetable crop						
a)	Pea	30	3750	As per Situation at Site	3000	90	Kharif and Rabi
	Tomato	15	7.5		1500	30	Kharif
	Capsicum	10	7.5		500	10	Kharif
	French Bean	20	2500		1000	25	Kharif
b)	Spice crop						
	Ginger	15	15000		975	34	Kharif
	Garlic	10	5000		500	16	Rabi
	Turmeric	15	30000		420	30	Kharif
	Coriander	10	250		35	2.5	Rabi

c)	Fruit crop						
<b>Total</b>							

## B.) Post harvest handling Plan

## 2. Post harvest support (Value addition)

### a) As fresh produce marketing (Explain the tabular information in the form of text)

Name of crop	Targeted Produce for fresh marketing*	Approx volume for fresh sale	Collection centre location (Name)	No. of RVs linked	Distance of Collection centre		No. of FIG's linked
					from Villages(as Average)	from nearby Road head	
Pea	Grading and Packaging	2200	Paharpani	08	2 Km	0 Km	08
Tomato	Grading and Packaging	1000	Paharpani	08	2 Km	0 Km	08
Capsicum	Grading and Packaging	425	Paharpani	08	2 Km	0 Km	08
French Bean	Grading and Packaging	800	Paharpani	08	2 Km	0 Km	08
Ginger	Grading and Packaging	825	Paharpani	08	2 Km	0 Km	08
Garlic	Grading and	400	Paharpani	08	2 Km	0 Km	08

	Packaging						
Turmeric	Grading and Packaging	300	Paharpani	08	2 Km	0 Km	08
Coriander	Grading and Packaging	15	Paharpani	08	2 Km	0 Km	08

\*Mention post harvest handling initiatives

b) Processing center plan-(*Explain the tabular information in the form of text*)

Division	Unit	Processing centre (Location )	Name of RV linked
Nainital	Bhirapani	Paharpani	08

c) Processed products plan - (*Explain the tabular information in the form of text*)

Name of Raw Produce	Final Product	Targeted Production during project period (qt)	Sale value (lakhs)	Market targeted
Coriander	Powder	13	4	Delhi and Uttarakhand
Turmeric	Powder	50	20	Delhi and Uttarakhand

d Requirements for processing unit (Tools/equipments & infrastructure etc.) (*Explain the tabular information in the form of text*)

Particulars/items	Quantity(no)	Unit cost(lakhs)	Total cost (Lakhs)
Vacuum Packaging Machine	01	20000	20000

e) Works under Repair of damaged assets – (specify the works with text)

<b>Item</b>	<b>Physical works targeted</b>	<b>Financial (Lakhs)</b>
Works under Repair of damaged assets	Repair of Existing Collection Centre	0.5
